ECOHARVEST
A partnership between Eco Education & Harvest Moon Backyard Farmers

ABOUT ECOHARVEST /
EcoHarvest is a partnership between Eco Education and Harvest Moon Backyard Farmers. Along with community members, we are working to create a garden at Clara Barton Open School in Minneapolis. Fresh produce from this garden will be used in the school lunch program, at Piccolo and donated to a local food shelf. In addition, this schoolyard garden will serve as a living classroom where after school and summer school programs will engage young people to learn more about healthy and locally grown food.

SUMMER PROGRAM /
The EcoHarvest Summer Program consists of eight lessons that will emphasize the importance of healthy and locally-grown food and include gardening skills and information as well as a fun, hands-on activity or art project.

ECO EDUCATION /
Environment. Education. Equity. The intersection of these words exemplifies the breadth and depth of our organization. Our goal is to support young people and educators through innovative, culturally relevant programs that spark environmental stewardship. We offer afterschool and summer school experiences as well as environmental education curriculum that can be integrated into middle school and high school classrooms.

HARVEST MOON BACKYARD FARMERS /
Our mission is to strengthen the Twin Cities local foods ecosystems by transforming landscapes into tasty, beautiful and sustainable mini-farms through which eaters connect directly with their farmers, food and land. To do that, we grow backyard food gardens and provide garden education for homeowners, renters, communities and businesses with a focus on organic and sustainable practices.
