Dear Mom and Dad!

In school, we're studying geometry. We're using geoboards. On the geoboards we're making shapes. We're trying to figure out the perimeter and the area.

A few weeks ago we went to Walker Senior center. We would read our swimming essays to the seniors. After that, we would ask them questions from a piece of paper. The first question was what were your favorite places to swim growing up. Then we would ask one of the seniors if they could think of a spring poem then we could give the senior the poem.

In science, we're working on a leg model. We used wooden sticks to make the bones, the rubber bands for the muscles and the paper clips were the tendons.

Love
Aadara!
